

# Too much reading. Too little time to interpret.

## Reports, headlines, macro data. One decision to prepare for.

Teams repeatedly find reports, reconcile periods and rebuild the same evidence trail. The important change can be buried in a familiar market summary.

### THE BUSINESS OUTCOME

Move from raw information to important changes, plausible drivers and implications worth investigating.

Bring the evidence into the meeting, with the uncertainty intact.

# Ask what changed. Leave ready to discuss it.

## MONITOR

What happened since I last checked?

Material movements, new evidence and changing risks, compared with an explicit baseline.

## INVESTIGATE

I heard West End is outperforming City. Is it true?

Test the claim across rents, vacancy, demand, supply and commentary.

## PREPARE

What belongs in my meeting brief?

Up to five developments, their business implications and the sources to verify them.

Follow the thread: expand a point → inspect the evidence → compare last quarter → decide what to watch

# Is West End outperforming City?

## TEST THE HYPOTHESIS

Rents: compare growth, not just rent levels.  
Vacancy: align coverage and Grade A definitions.  
Take-up: compare the same reporting periods.  
Supply: distinguish future space from pre-lets.  
Commentary + macro: look for drivers and counterevidence.

## A USEFUL CONCLUSION

Supported · Partially supported  
Not supported · Insufficient evidence

Explain which indicators support the claim, which challenge it and what is missing. Keep facts separate from interpretation.

Investigation design shown here; this slide does not assert a current market verdict.

# Every important claim has a trail back to evidence.

## SHOW THE CALCULATION

Source values, units and reporting periods alongside derived deltas. Transparent screening thresholds.

## KEEP DISAGREEMENT

Different numbers, definitions or dates remain visible. Conflicting reports are never averaged into one answer.

## EXPLAIN POSSIBLE DRIVERS

Cited facts are separate from interpretation. Consistency and correlation are not proof of causation.

## MAKE VERIFICATION QUICK

Open the publisher, title, date, URL and relevant passage. Missing evidence stays visible, including unsupported forecasts.

# Prove the research workflow. Then automate it.

## POC TODAY

On-demand market briefs  
Hypothesis investigations  
Source-backed watchlists  
Manual evidence refresh

Implications to investigate, not  
investment recommendations.

## MEASURE THE VALUE

Time to a usable meeting brief  
Time to verify a claim  
Material developments found  
Missing or disputed evidence  
exposed

Compare with the team's manual  
research baseline; no savings are  
claimed yet.

## NEXT, AFTER VALIDATION

Automated monitoring  
Material-change alerts  
Private reports and leasing data  
Team-specific watchlists

Prioritize additions using observed  
workflow needs.
